Rosebud Azalea
Rhododendron 'Rosebud'

Height: 8 feet

Spread: 8 feet

Sunlight:

Hardiness Zone: 4

Group/Class: Gable Hybrids

Description:

Lovely pink buds unfurl to reveal pink double blooms with rich red centers and cover this azalea in mid spring; a sturdy upright shrub with attractive deep green foliage; needs highly acidic and organic soil that is well drained

Ornamental Features

Rosebud Azalea is covered in stunning clusters of lightly-scented pink trumpet-shaped flowers with red throats at the ends of the branches in mid spring before the leaves. It has dark green foliage throughout the season. The glossy narrow leaves turn an outstanding yellow in the fall. The fruit is not ornamentally significant.

Landscape Attributes

Rosebud Azalea is an open multi-stemmed deciduous shrub with an upright spreading habit of growth. Its relatively coarse texture can be used to stand it apart from other landscape plants with finer foliage.

This is a relatively low maintenance shrub, and should only be pruned after flowering to avoid removing any of the current season's flowers. It has no significant negative characteristics.

Rosebud Azalea is recommended for the following landscape applications;

- Accent
- Mass Planting
- General Garden Use

Planting & Growing

Rosebud Azalea will grow to be about 8 feet tall at maturity, with a spread of 8 feet. It tends to be a little leggy, with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 40 years or more.

This shrub does best in full sun to partial shade. It requires an evenly moist well-drained soil for optimal growth, but will die in standing water. It is very fussy about its soil conditions and must have rich, acidic soils to ensure success, and is subject to chlorosis (yellowing) of the leaves in alkaline soils. It is somewhat tolerant of urban pollution, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This particular variety is an interspecific hybrid.
